

Template Letter of Medical Necessity for BlueCross BlueShield of Florida

Instructions: Information to be described in the following template letter of medical necessity aligns with categories found in the corresponding Summary of Medical Criteria for OCAs. If a patient does not fit a criterion, available existing literature for each case should be supplemented with this letter.

This is an example summary, and information should be provided to insurance companies at the discretion of the health care provider.

BlueCross BlueShield of Florida Pre-Authorization

I am writing this letter to request pre-authorization for Jane Doe to perform an osteochondral allograft transplantation surgery. This letter provides information regarding the patient's medical history, current condition, diagnosis, and treatment rationale to support the medical necessity for an osteochondral allograft. This submission also includes all medical records and clinical notes, as well as the supporting medical literature.

Summary of patient medical history, prior treatments, and current symptoms

Describe the following:

- ✓ Patient demographic
- ✓ Patient condition
- ✓ Cause of defect (patient diagnosis)
- ✓ Prior treatments

Jane Doe is a skeletally mature 35-year-old female with a BMI of 30, who was first presented to my care in January 2016. The patient described pain and popping in the patient's right knee since July 2015, which has persisted for over 6 months. The patient is an avid runner and has a lesion associated with repetitive trauma to the right knee. The patient has attempted and failed all conservative treatments for more than 6 months including: DESCRIBE ALL PREVIOUS FAILED TREATMENTS.

Summary of examination: defect description and joint health

Describe the following

- ✓ Medical evaluation
- ✓ Cartilage defect size
- ✓ Cartilage defect characterization
- ✓ Lesion (defect) and surrounding cartilage
- ✓ Joint health
- ✓ Knee stability

On February 12, 2016, I performed a diagnostic MRI to evaluate the status of Jane Doe's knee, which has been included with this prior authorization submission. A full thickness

lesion (Outerbridge Grade III) was found on the patient's **right lateral femoral condyle** with an estimated size of **4 cm² (2.2cm x 1.8cm)**. The MRI demonstrates no significant **osteoarthritis (Kelleren-Lawrence grade 1)**. The patient showed **normal alignment of +2 degrees from neutral, with no requirement to complete intraoperative realignment.**

Treatment Recommendations and Rationale

Describe the following:

- ✓ Reason for treatment (include diagnosis and treatment codes)
- ✓ Not candidate for TKA
- ✓ Describe success rates of similar patients in practice and supporting literature
- ✓ Published studies
- ✓ Physician dictations
- ✓ Results of diagnostic tests
- ✓ Patient compliance

The patient is an ideal candidate for osteochondral allograft. *(Reason patient not a candidate for TKA and needs OCA)* The patient is **35** years old and is too young for a total knee replacement. This osteochondral allograft procedure may prevent the need for a future total knee replacement and provide the patient a higher quality of life and return to activity. *(Describe your experience and success rates in your practice)* In my practice, I have seen high success rates **(~85%)** with this procedure for patients with similar defects in the lateral condyle. This procedure is medically necessary and meets all the criteria outlined in the **BlueCross BlueShield of Florida** medical policy **(Policy 02-20000-65)**. Additionally, in the clinical community, osteochondral allografts are the gold standard for treating large chondral and osteochondral defects in the femoral condyle. Over a decade of literature and clinical studies support the efficacy of this procedure and high success rates (75-85%). *(Describe attachments)* Attached with this letter are a number of peer-reviewed clinical publications that demonstrate the excellent clinical outcomes of this procedure for treating large chondral/osteochondral defects of the femoral condyles. Also attached are my clinical notes, dictations, results of diagnostics tests (i.e. MRI, arthroscopy, x-ray), and patient history.

Sincerely,

Physician's Name
